Features

The fastest and most compact scanner in its class

In addition to being the smallest scanner in its class, the fi-6140 is able to scan an impressive 60 pages or 120 images per-minute in monochrome (A4, 200dpi) as well as 40 pages or 80 images per-minute in color (A4, 200 / 300dpi). Furthermore, its ability to continuously scan 50 page mixed batch documents containing paper of different weight, quality and sizes enables the fi-6140 efficiently digitize large volumes of paper documents.

The first scanner in its class to adopt high end "fi-Series" functions

The fi-6140 is the first business scanner in its class to inherit highly regarded intelligent "fi-Series" automatic features from its higher end siblings. Such features facilitate worry free mixed batch scanning of documents containing paper of different weights, quality and sizes.

Paper protection function

This function puts users at ease with its ability to protect valuable documents by immediately stopping the scanning process when it recognizes that a jam is about to occur.

Intelligent multifeed function

The intelligent multifeed function simplifies pre-scanning preparation and improves efficiency by ignoring documents that tend to trigger false multifeed alerts, such as photo and sticky note attached documents.

Speedy "auto-color recognition", "auto-size recognition" and "auto-deskew" functionality

The fi-6140 is the first "dedicated image processing LSI" armed scanner in its class to offer such highly valued automatic functions. As a result, the fi-6140 brings about dramatic digitizing efficiencies through fast scanning and simultaneous high speed image processing.

Excellent card feedability

In addition to being able to scan embossed cards*, the fi-6140 is able to scan up to 3 plastic cards at a time (up to 1.4mm thick) in order to meet a wide variety of business needs.

* This applies to ISO 7810 cards

Comes bundled with the "automatic job separation" function armed ScandAll PRO Ver1.5 image capture software

The fi-6140 supports barcode and patchcode reading functionality which enables it to simultaneously scan and automatically separate different jobs with its automatic job separation function. The result is improved digitization efficiency.
